SUMMIT TECH LAUNCHES FIRST RCS 5.0 JOYN ANDROID APP IN NORTH AMERICA

MetroPCS selects Summit Tech's RCS joyn™ mobile application

Montreal, Canada – Nov 1, 2012: Summit Tech announced today that MetroPCS Communications, Inc. has selected the *Summit RCS Smartphone Application* for its launch of next generation **Rich Communication Service (RCS)**, branded **joyn by MetroPCS**, available on the MetroPCS 4G LTE network.

The application is available initially as a download through both the @metro App Store and Google Play™ for the Samsung Galaxy Attain™ 4G. The *Summit RCS Smartphone Application* is based on the global GSMA RCS 5.0 standard, which ensures service interoperability of multimedia services between mobile carriers globally. MetroPCS' RCS services will deliver an experience beyond voice and basic messaging to provide customers with a unified and intuitive way to use enriched services like integrated instant messaging or chat, WiFi and video calling and simplified content sharing.

Summit Tech was the first provider of joyn™ and RCS 5.0 based mobile applications to successfully launch in Europe, and has now followed this with the first commercially launched RCS 5.0 mobile application in North America.
